understanding multivariable calculus: problems, solutions ... - the study of multivariable calculus has surprisingly few prerequisites. for a high school student who has completed the equivalent of the advanced placement calculus ab and calculus bc courses, this course is a very logical next step. and although some university programs teach multivariable calculus only after linear algebra.

multivariable calculus - bc - multivariable calculus arose from humans trying to understand the motion of the planets. at that time a more accurate title for this course might have been the calculus of motion in space. but now it is applied to all areas of physics including electromagnetics and quantum mechanics, along with orbital theory in chemistry, thence branching out to

multivariable calculus - hbc - 1.3 involving two variables, say x and y and this equation defines a collection of ordered pairs of numbers, namely all (x,y) that satisfy the equation. the corresponding picture in the plane is called the graph of the equation. for example, consider the equation $x^2 + y^2 = 1$.

multivariable calculus - mathm - single-variable calculus, and also relates to formulas for area and volume from mat 169 that are defined in terms of determinants, or equivalently, in terms of the dot product and cross product. 1.1.3 vector calculus in the last part of the course, we will study vector fields, which are functions $\mathbf{F}(x,y,z)$.
